An aircraft engine, often referred to as an aero engine, is the power component of an aircraft propulsion system. Most aircraft engines are either piston engines or gas turbines, although in recent years many small UAVs have used electric motors Manufacturing industry. In ...

*Aircraft engine - Wikipedia*

The turboprop engine is a turbojet engine that uses a gearing system to connect to the aircraft propeller. The gearbox of an aircraft comes with a turbojet that spins the shaft attached to it. The gearbox slows down the spinning shafts to allow the gear to connect to the propeller.

Lycoming Engines started in 1907 and has been one of the most common aircraft engines with a wide support network and parts availability. The Lycoming engines are horizontally opposed 4 cylinder 4 stroke engines. The O-235 was installed in many aircraft and is a very popular engine with a 2400 hour to be overhauled (TBO) and 115 to 135 hp.

Jet engines move the airplane forward with a great force that is produced by a tremendous thrust and causes the plane to fly very fast. All jet engines, which are also called gas turbines, work on the same principle. The engine sucks air in at the front with a fan. A compressor raises the pressure of the air.
