Page 18/51
A 33/11kV indoor GIS substation with a 33kV fault level of 40kA is considered. The soil conditions considered are desert conditions and hence with poor resistivity.

Page 19/51
Soil resistivity measurement is done using Wenner 4 point method. The measured soil values are then analyzed using the Soil Analysis module of CYMGRD software.

Construction Of 33/11kv Gis Substations 2 X 31.5 Mva Grid for a 33/11kv Gis Substation at a ...

The thesis deals with the analysis of Construction of Power Lines and Substation Switchyard of 33/11 KV. In today's life electricity
plays a very vital role. The demand of electricity is being increased day by day. Therefore many new projects are

Construction Of 33 11kv Gis Substations 2 X 31.5 Mva

The robust and low maintenance GIS based design minimizes the substation’s footprint by as much as 70 percent, enabling it to
be installed indoors, in busy urban areas and in harsh environments. Our in-depth knowledge of the power value chain, as well as grid codes and utility practices in use around the world, enable us
to provide turnkey solutions and engineered packages across a wide ...
