This project-oriented facilities design and material handling reference explores the techniques and procedures for developing an efficient facility layout, and introduces some of the state-of-the-art tools involved, such as computer simulation. A "how-to," systematic, and methodical approach leads readers through the collection, analysis and development of information to produce a quality functional plant layout. Lean manufacturing; work cells and group technology; time standards; the concepts behind calculating machine and personnel requirements, balancing assembly lines, and leveling workloads in manufacturing cells; automatic identification and data collection; and ergonomics. For facilities planners, plant layout, and industrial engineer professionals who are involved in facilities planning and design.

Provides a comprehensive view of the work of Sergei Rachmaninoff including a bibliography, discography, and a brief biography.

In this highly practical volume, the contributing authors explore some of the dimensions associated with aging in place. There are increasing numbers of older Americans who are faced with fundamental changes in their economic circumstances, health, and marital status which have an impact on their ability to age in place. Without the necessary supports many may have no other choice but to be prematurely or inappropriately placed in costly health care facilities or be forced to move into unfamiliar, less safe, less satisfactory housing environments. Aging in Place explores some of the dimensions associated with aging in place and informs readers about unmet needs and available living options for elderly persons. Experts discuss a number of crucial factors regarding the availability of social supports and the impact it has on the independence of the elderly, specifically their living arrangements. They address the issue of control and how access to social contact and real choices about services and facilities increases independence among the elderly; congregate housing as an alternative to nursing care for those elderly too frail for less supportive housing; discharge policies concerning frailty in senior living arrangements; and the lack of a full range of services in many alleged full service communities.

This book presents computational interaction as an approach to explaining and enhancing the interaction between humans and information technology. Computational interaction applies abstraction, automation, and analysis to inform our understanding of the structure of interaction and also to inform the design of the software that drives new and exciting human-computer interfaces. The methods of computational interaction allow, for example, designers to identify user interfaces that are optimal against some objective criteria. They also allow software engineers to build interactive systems that adapt their behaviour to better suit individual capacities and preferences.00This book introduces computational interaction design to the reader by exploring a wide range of computational interaction techniques, strategies and methods. It explains how techniques such as optimisation, economic modelling, machine learning, control theory, formal methods, cognitive models and statistical language processing can be used to model interaction and design more expressive, efficient and versatile interaction.

Things Better than BOOBS is creative, suspenseful, sarcastic, and laughter provoking all at once. It's hilarious and clever take-home message campaigns loudly for an agreeably timeless yet generally unspoken notion. It is a brilliant gift idea for any humorous occasion and a must have on any book shelf or coffee table where sarcasm meets intellectual wit.
