C. Countries felt threatened by another nation and the only way to protect themselves was to create an empire. D. Countries felt threatened by other nations, so they attacked in order to gain land and natural resources.

Heat capacity - Wikipedia

The SI unit for heat capacity of an object is joule per kelvin (J/K, or J K⁻¹). Since an increment of temperature of one kelvin is a quantity proportional to the amount of heat energy to the product... heat capacity for infrared radiation, which is... to derive. See common sense or review entropy and density of energy.

Specific heat capacity - Wikipedia

Sometimes the gram is used instead of kilogram for the unit of mass: 1 J/K/kg = 0.001 J/K/g. The specific heat of a substance is its ability to store heat; it is the amount of heat that a sample of a substance requires for a temperature change of one degree. The specific heat of a substance is.../?. Therefore, the SI unit J/K/kg is equivalent to metre squared per second squared per kelvin (m² K⁻¹ s⁻²). Imperial engineering units
