Maritime navigation has rapidly developed since the publication of the last edition of the title with methods of global position fixing for shipping becoming standardized. As in the previous two editions, this edition will provide a sound basis for the understanding of modern navigation systems and brings the student or professional up-to-date with the latest developments in technology and the growing standardization of maritime navigation techniques. Developed with close scrutiny from the US Merchant Marine Academy and the major maritime navigation centres in the UK, out-dated techniques have been replaced by an expanded section on the now standard Navstar GPS systems and the Integrated Nav. In addition, a new chapter on the application of electronic charts will also be included, as well as problems at the end of each chapter with worked solutions.

This handbook, first issued in 1942, is designed to be used as a textbook or a study guide for the "hawsepiper." The twenty-five chapters contain information on electronics, celestial navigation, rules of the road, engineering, etc., --that will be helpful to the third mate, experienced mariner, or student preparing for a licensing examination.

Contains also Annual report.
