In 1919, the German mathematician Theodor Kaluza developed a theory that maintained all the formalism of Riemannian geometry but extended the geometry 's reach by proposing the possibility that Nature in fact utilized a five-dimensional spacetime, with electromagnetism appearing as a

The unification attempt by Hermann Weyl (1885–1955) in 1918, finally, was to apply a gauge transformation within a four-dimensional space with a generalized non-Riemannian metric [10]. Although Nordström was the first to introduce a five-dimensional space, it was Kaluza's theory from

Weyl was a fan of Hilbert and one of the first researchers in general relativity. He can be credited for the concept of "gauge" and "gauge theory", at least in the context of Abelian gauge theories. Weyl also wanted to unify general relativity with electromagnetism by extending the
