An integrated package of powerful probabilistic tools and key applications in modern mathematical data science.

A comprehensive and intriguing account of the evolution of arithmetic and geometry, trigonometry and algebra, explores the interconnections among mathematics, physics, and mathematical astronomy and provides a history of the discipline from a new perspective. Originally published as The Norton History of the Mathematical Sciences. Reprint.

Contains a collection of clever mathematical applications of linear algebra, mainly in combinatorics, geometry, and algorithms. Each chapter covers a single main result with motivation and full proof in at most ten pages and can be read independently of all other chapters (with minor exceptions), assuming only a modest background in linear algebra. --from publisher description

This book contains original reviews by well-known workers in the field of mathematical linguistics and formal language theory, written in honour of Professor Solomon Marcus on the occasion of his 70th birthday. Some of the papers deal with contextual grammars, a class of generative devices introduced by Marcus, motivated by descriptive linguistics. Others are devoted to grammar systems, a very modern branch of formal language theory. Automata theory and the algebraic approach to computer science are other well-represented areas. While the contributions are mathematically oriented, practical issues such as cryptography, grammatical inference and natural language processing are also discussed. Contents:Substitutions on Words and LanguagesApplications to Cryptography (A Atanasiu)Grammar Systems: A Multi-Agent Framework for Natural Language Generation (E Csuhaj-Variu)Normal Forms for Contextual Grammars (A Ehrenfeucht et al.)Control Mechanisms on #-Context-Free Array Grammars (R Freund)On Transitive Cofinal Automata (M Ito & M Katsura)Algebraic Foundations for Montague Grammars (H Jurgensen & K Tent)A Periodic Languages and Generalizations (J Kari & G Thierrin)Matrix Grammars Versus Parallel Communicating Grammar Systems (V Mihaiche)Reducts Versus Reducing Operators (M Novotny)On Conditional Grammars and Conditional Petri Nets (F-L Tiplea)and other papers Readership: Computer scientists. keywords:Algebra,Array Grammar,Automaton,Chomsky Grammar,Combinatorics on Words,Cryptography,Grammar System,Marcus Grammar,Mereology,Montague Grammar,Natural Language,Petri Net
