Phillip Reed's latest building guide tackles what many regard as the ultimate expression of the ship model maker's art, the Navy Board model. His step-by-step construction of a miniature 1/192 scale model of the Royal George of 1715 demonstrates all the conventions of Navy Board framing and planking. With the aid of nearly 400 photographs, he takes the reader through every building stage. Methods of hull and deck framing, internal and external planking, and the construction of the complex stern are all covered. Reed

Nautismo.com Aquí also shows how to render the multitude of decorative carvings on the figurehead, stern, and broadside. This is the first book in many years to cover the well-known and sought-after early eighteenth-century Navy Board models. The author takes the reader through every stage of the work with the aid of nearly 400 photographs. Methods of hull and deck framing, internal and external planking, the construction of the complex stern with its array of galleries, doors and windows, are all covered; and the rendering of the multitude of decorative carvings on the figurehead,

stern and broadside is also demonstrated. A section showing, amongst others, his model of the siren, explains how the techniques used to frame Royal George can be adapted for ships of a later date, using single and double frames closer to full-size practice. Here is an invaluable manual from which any model maker can benefit from the lifetime's experience of one of the world's leading exponents of the art of miniature shipbuilding.

Clearly written and amply illustrated with 208 figures, this classic guide ranges from simple and

useful knots to complex varieties. Additional topics include rope splicing, working cordage, hammock making, more.

Describes and depicts in detail how 17th-century English, French, Dutch, and other European trading ships and warships were rigged. Over 350 fine line drawings, 25 halftones.

Ships in Scale magazine called our best-selling manual for the first-time kit-builder, Ship Modeling Simplified, a "Bible for the novice modeler." Model Ship Builder said "the only problem with this book is that it should have come out years ago." Now comes the next logical step, a book on building ship models without kits, from Edwin Leaf, past president and resident guru of the prestigious Philadelphia Ship Model Society. Following the proven format of Ship

Modeling Simplified, here is the first complete, step-by-step course in building model ships from scratch--everything from schooners and clipper ships to modern ocean-going freighters and steel warships. This book covers in detail everything the first-time scratch-builder needs to know: choosing the right subject, building from plans, drawing scaled plans from photographs, and buying tools and materials. It also covers building half models, planked hulls, lapstrake hulls, plank-on-frame, plank-on-bulkhead, lift models, modern ships, ancient ships, masting and rigging, sails

and flags. Sources and an illustrated glossary are included.

A highly detailed, superbly illustrated manual introducing serious model builders to hand-crafting ship models from the bottom up. Not for beginners. 133 illustrations.
